Foreword	xiii
Introduction	xvii
Acknowledgments	xxiii
Part I The Geometric Setting	
Introduction	3
1. FIBER BUNDLES	9
1 Definition of Fiber Bundles	10
2 Fibered Coordinates	22
3 Particular Classes of Fiber Bundles	23
4 Fiber Bundles with Structure Group	34
5 Canonical Constructions of Bundles	39
6 Vector Fields on a Bundle	46
Exercises	50
2. JET BUNDLES	53
1 The Jet Bundles	53
2 Prolongation of Morphisms and Sections	57
3 Contact Forms	60
4 The Infinite Jet Bundle	63
5 Generalized Vector Fields	67
6 Lie Derivative of Sections	70

7	Examples	72
8	Differential Equations	74
	Exercises	77
3.	PRINCIPAL BUNDLES AND CONNECTIONS	79
1	Principal Bundles and Their Right Action	80
2	Invariant Vector Fields	81
3	Local Expression of Principal Automorphisms	82
4	Infinitesimal Generators of Automorphisms	85
5	Bundle Connections	88
6	Induced Connections on Associated Bundles	98
7	Examples	99
8	Structures Induced by a Connection	105
	Exercises	112
4.	NATURAL BUNDLES	113
1	Natural Bundles	113
2	Natural Morphisms	118
3	Lie Derivatives of Sections	120
4	Examples	122
	Exercises	124
5.	GAUGE NATURAL BUNDLES	125
1	Gauge Natural Bundles	125
2	Gauge Natural Prolongations of a Principal Bundle	128
3	The Infinitesimal Generators of Automorphisms (IGA)	135
4	Lie Derivatives of Sections	138
5	Examples	139
	Exercises	142
Part II The Variational Structure of Field Theories		
	Introduction	145

<i>CONTENTS</i>	369
6. THE LAGRANGIAN FORMALISM	151
1 The Lagrangian and the Action Functional	152
2 The Variational Morphisms	155
3 Euler-Lagrange Equations	169
4 Poincaré-Cartan Form	173
5 Symmetries and Nöther's Theorem	180
6 Examples	187
7 Conserved Quantities in Field Theory	204
8 BRST Transformations	213
Exercises	217
7. NATURAL THEORIES	219
1 Definition of Natural Theories	220
2 Bianchi Identities and Superpotentials	224
3 Conserved Quantities	226
4 Geodesics	233
5 General Relativity	234
6 On Maxwell and Yang-Mills Naturality	247
7 Gravity and Bosonic Matter	251
8 Metric-Affine Formalism for Gravity	265
Exercises	268
8. GAUGE NATURAL THEORIES	269
1 Motivations	270
2 Gauge Natural Field Theories	272
3 Generalized Bianchi Identities and Superpotentials	273
4 Conserved Quantities	275
5 Yang-Mills Theories	277
6 Gauge Natural Formulation of Hilbert Lagrangian	280
7 Vielbein Formulation of Gravitational Theories	281
8 Kosmann Lift	288
Exercises	291

Part III Spinor Fields

Introduction	295
9. SPIN STRUCTURES AND SPIN FRAMES	299
1 Clifford Algebras and Spin Groups	299
2 Spin Structures	304
3 Example: Spin Structures on Spheres	307
4 Spin Frames	314
5 The Bundle of Spin Frames	317
6 Other Formulations of General Relativity	319
7 Kosmann Lift	321
Exercises	323
10. SPINOR THEORIES	325
1 Dirac Spinor Field	325
2 Neutrinos	329
3 (Reduced) Electroweak Model	332
4 Anticommuting Majorana Spinor Fields	339
5 Wess-Zumino Model	343
6 Rarita-Schwinger Model	345
Exercises	347
Final Word	349
References	353
Bibliography	356
Analitic Index	359
