

## Index

Dedication	1	Purely metric $f(R)$ -theories	81
Acknowledgements	2	Brans–Dicke theories with a potential	82
Preface	3	1.7 Lagrangian mechanics	84
Highlights	10	Homogeneous formalism for mechanics	85
Index	13	The phase space	88
Index of Figures	19	Hamiltonian formalism	89
Index of Symbols	21	Helmholtz Lagrangian	95
Notation	22	Time-dependent mechanics	96
		Poincaré–Cartan form	99
		The relativistic particle	101
<b>Part 1 Relativistic theories</b>	<b>25</b>	1.8 Epilogue	105
Introduction	26	References	106
<b>1 Spacetime and field theories</b>	<b>30</b>	<b>2 General covariance</b>	<b>107</b>
1.1 Overture	30	2.1 Introduction	107
1.2 Spacetime	31	Natural theories	111
1.3 Variational setting	34	Gauge-natural theories	113
Local Euler–Lagrange equations	38	Everything is in transformation rules	117
Global Euler–Lagrange equations	39	2.2 Utiyama-like arguments	120
Uniqueness results	41	Utiyama-like theorems for natural theories	120
Non-globality of Poincaré–Cartan part at order 3	43	Utiyama-like arguments for gauge-natural theories	124
1.4 Symmetries and Noether theorem	44	2.3 Initial value problems for covariant theories	125
Lagrangian symmetries	44	ADM space-times	126
Noether theorem	45	Evolutionary equations	129
Continuity equations	46	2.4 Hole argument	134
1.5 Pure divergences	48	Step-like functions	137
Symmetries of the action	49	Physical states and pure gauge transformations	139
Generalised symmetries	49	Physical states and reparameterisation of trajectories	139
Symmetries of a differential equation	50	Physical states in spacetimes with compact space	140
1.6 Examples of field theories	50	Physical states in spacetimes with non-compact space	141
Vibrating flat plate	51	Local Lagrangians	143
Degenerate Lagrangians	52	2.5 Covariance principles	144
Real Klein–Gordon field	54	Globality	145
Maxwell electromagnetism	58	Principle of general relativity (passive covariance)	147
Dirac monopole	63	General covariance (active covariance)	149
Lagrangian formulation of Maxwell electromagnetism	66	2.6 Physical content of general covariance	152
Maxwell electromagnetism with a charged field	69	Electromagnetism on Minkowski	153
Interlude	75	Canonical objects	154
Chern–Simons theory	76	Evolution of physical degrees of freedom	155
Hilbert–Einstein theory	78	2.7 Examples	156

	<i>Relativistic point</i>	156			
	<i>Standard Hilbert–Einstein general relativity</i>	158			
	<i>Standard Einstein–Maxwell–Klein–Gordon theory</i>	159			
	<i>Yang–Mills theories</i>	162			
	<i>Vielbein formalism</i>	165			
	<i>Spin frames and spinor fields</i>	172			
	<i>Conformal gravity</i>	180			
	<i>Weyl electromagnetism</i>	188			
	Appendix A	188			
	References	193			
2.8	Exercises	193			
<b>3</b>	<b>Conservation laws</b>	<b>195</b>			
3.1	Introduction	195			
3.2	Noether currents in natural theories	196			
	<i>Reduced currents</i>	198			
	<i>Conservation laws with currents</i>	200			
	<i>Superpotentials</i>	202			
3.3	Noether currents gauge-natural theories	204			
	<i>Unifying notation</i>	207			
3.4	Conserved quantities	208			
3.5	Augmented variational principles	211			
	<i>Relative conservation laws</i>	213			
	<i>Variation of conserved quantities</i>	214			
	<i>Schwarzschild anomalous factor</i>	215			
	<i>Definition of augmented variational principles</i>	218			
3.6	Examples	219			
	<i>Hilbert Lagrangian</i>	219			
	<i>Yang–Mills</i>	223			
	<i>Kerr–Newman solution</i>	226			
	<i>BTZ solution</i>	227			
	<i>First order non-covariant Einstein Lagrangian</i>	228			
	<i>Chern–Simons</i>	229			
	<i>Spinor theory</i>	230			
	References	234			
3.7	Exercises	234			
<b>4</b>	<b>Dynamical equivalence between field theories</b>	<b>236</b>
